

One-dimensional turbulence (ODT): computationally efficient modeling of turbulent reacting flows

Victoria B. Stephens, David O. Lignell*

*Department of Chemical Engineering, Brigham Young University, Provo, UT 84602,
United States*

Abstract

Ca. 100 words

Keywords: turbulence, reacting flows, one-dimensional turbulence

Required Metadata

Current code version

Ancillary data table required for subversion of the codebase. Kindly replace examples in right column with the correct information about your current code, and leave the left column as it is.

Nr.	Code metadata description	Please fill in this column
C1	Current code version	2.1
C2	Permanent link to code/repository used for this code version	<i>github.com/BYUignite/ODT</i>
C3	Code Ocean compute capsule	
C4	Legal Code License	MIT license (MIT)
C5	Code versioning system used	Git
C6	Software code languages, tools, and services used	C++, Python 3
C7	Compilation requirements, operating environments & dependencies	CMake 3.12+, Cantera, Git, Doxygen (optional)
C8	If available Link to developer documentation/manual	
C9	Support email for questions	davidlignell@byu.edu

Table 1: Code metadata (mandatory)

1 The permanent link to code/repository or the zip archive should include
2 the following requirements:

- 3 • README.txt and LICENSE.txt.
- 4 • Source code in a src/ directory, not the root of the repository.
- 5 • TO DO: Tag corresponding with the version of the software that is
6 reviewed.
- 7 • TO DO: Documentation in the repository in a docs/ directory, and/or
8 READMEs, as appropriate.

9 1. Motivation and significance

10 Introduce the scientific background and the motivation for developing the
11 software. [1]

12 Explain why the software is important, and describe the exact (scientific)
13 problem(s) it solves.

14 Indicate in what way the software has contributed (or how it will con-
15 tribute in the future) to the process of scientific discovery; if available, this
16 is to be supported by citing a research paper using the software.

17 Provide a description of the experimental setting (how does the user use
18 the software?).

19 Introduce related work in literature (cite or list algorithms used, other
20 software etc.).

21 **2. Software description**

22 Describe the software in as much as is necessary to establish a vocabulary
23 needed to explain its impact.

24 *2.1. Software Architecture*

25 Give a short overview of the overall software architecture; provide a pic-
26 torial component overview or similar (if possible). If necessary provide im-
27 plementation details.

28 *2.2. Software Functionalities*

29 Present the major functionalities of the software.

30 *2.3. Sample code snippets analysis (optional)*

31 **3. Illustrative Examples**

32 Provide at least one illustrative example to demonstrate the major func-
33 tions.

34 Optional: you may include one explanatory video that will appear next
35 to your article, in the right hand side panel. (Please upload any video as a
36 single supplementary file with your article. Only one MP4 formatted, with
37 50MB maximum size, video is possible per article. Recommended video
38 dimensions are 640 x 480 at a maximum of 30 frames/second. Prior to
39 submission please test and validate your .mp4 file at *http : //elsevier –*
40 *apps.sciverse.com/GadgetVideoPodcastPlayerWeb/verification*. This tool
41 will display your video exactly in the same way as it will appear on ScienceDi-
42 rect.).

43 **4. Impact**

44 **This is the main section of the article and the reviewers weight**
45 **the description here appropriately**

46 Indicate in what way new research questions can be pursued as a result
47 of the software (if any).

48 Indicate in what way, and to what extent, the pursuit of existing research
49 questions is improved (if so).

50 Indicate in what way the software has changed the daily practice of its
51 users (if so).

52 Indicate how widespread the use of the software is within and outside the
53 intended user group.

54 Indicate in what way the software is used in commercial settings and/or
55 how it led to the creation of spin-off companies (if so).

56 **5. Conclusions**

57 Set out the conclusion of this original software publication.

58 **6. Conflict of Interest**

59 We wish to confirm that there are no known conflicts of interest associated
60 with this publication and there has been no significant financial support for
61 this work that could have influenced its outcome.

62 **Acknowledgements**

63 This work was supported by the funding from the National Science Foun-
64 dation under Grant Number CBET-1403403.

65 Special thanks to Alan R. Kerstein for his significant contributions to
66 model development. Additional thanks to Heiko Schmidt, Juan Medina, and
67 Marten Klein of Brandenburg University of Technology Cottbus-Senftenberg,
68 Michael Oevermann and Marco Fistler of Chalmers University of Technology,
69 and Vladimir P. Solovjov of Brigham Young University.

73 modeling for cylindrical and spherical flows: model formulation and ap-
74 plication 32 (4) (2018) 495–520. doi:10.1007/s00162-018-0465-1.

75 Please add the reference to the software repository if DOI for software is
76 available.

77 **Current executable software version**

78 Ancillary data table required for sub version of the executable software:
79 (x.1, x.2 etc.) kindly replace examples in right column with the correct
80 information about your executables, and leave the left column as it is.

Nr.	(Executable) software meta-data description	Please fill in this column
S1	Current software version	For example 1.1, 2.4 etc.
S2	Permanent link to executables of this version	For example: https://github.com/combogenomics/DuctApe/releases/tag/DuctApe-0.16.4
S3	Legal Software License	List one of the approved licenses
S4	Computing platforms/Operating Systems	For example Android, BSD, iOS, Linux, OS X, Microsoft Windows, Unix-like , IBM z/OS, distributed/web based etc.
S5	Installation requirements & dependencies	
S6	If available, link to user manual - if formally published include a reference to the publication in the reference list	For example: http://mozart.github.io/documentation/
S7	Support email for questions
